Sudoku: Sudoku Domain Objects

This page last changed on Jun 15, 2009 by nbasham.

The following is a work in progress.

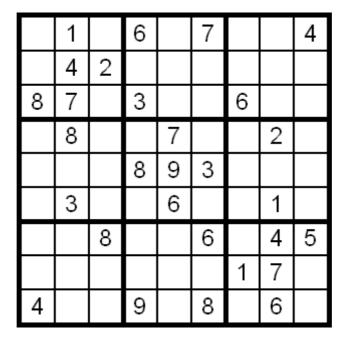

Overview

A Sudoku board consists of 81 cells organized in 9 rows by 9 columns. Each cell has a unique index from 0 to 80 start from left to right and top to bottom. The board can also be described in terms of 9 grids each 3 rows by 3 columns starting from left to right, top to bottom.

The goal of Sudoku is for the user to fill in each cell with the correct value. A value is a number between 1 and 9 defined by the problem. The Sudoku game starts off with a number of cells revealed to the user, the harder the level the fewer cells that are initially revealed. The user can then enter a guess or hints in each cell until all cells have values. The game is won when each cell has a value and each of those values is unique to it's row, column and grid. The user's guess, hints and initially revealed cells make up the user's solution, note the solution may or may not be correct.

The Board

81 cells, made from 3x3 collection of grids, consisting of 9 rows and 9 columns.

Cells

81 cells make up the board.

Rows And Columns

A <u>board</u> consists of rows, each made up of 9 horizontal <u>cells</u> that span 3 <u>grids</u> and columns, each made up of 9 vertical <u>cells</u> that span 3 <u>grids</u>.

Grids

A 3x3 collection of cells starting from left to right, top to bottom.

| 0 | 0 | 0 | 1 | 1 | 1 | 2 | 2 | 2 |
|---|---|---|---|---|---|---|---|---|
| 0 | 0 | 0 | 1 | 1 | 1 | 2 | 2 | 2 |
| 0 | 0 | 0 | 1 | 1 | 1 | 2 | 2 | 2 |
| 3 | 3 | 3 | 4 | 4 | 4 | 5 | 5 | 5 |
| 3 | 3 | 3 | 4 | 4 | 4 | 5 | 5 | 5 |
| 3 | 3 | 3 | 4 | 4 | 4 | 5 | 5 | 5 |
| 6 | 6 | 6 | 7 | 7 | 7 | 8 | 8 | 8 |
| 6 | 6 | 6 | 7 | 7 | 7 | 8 | 8 | 8 |
| 6 | 6 | 6 | 7 | 7 | 7 | 8 | 8 | 8 |

Cell Index

Each cell is uniquely identified by a index from 0 to 80, starting at the top left of the board and proceeding from left to right and top to bottom.

| | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
|---|----|----|----|----|----|----|----|----|----|
| 0 | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| 1 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 |
| 2 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 |
| 3 | 27 | 28 | 29 | 30 | 31 | 32 | 33 | 34 | 35 |
| 4 | 36 | 37 | 38 | 39 | 40 | 41 | 42 | 43 | 44 |
| 5 | 45 | 46 | 47 | 48 | 49 | 50 | 51 | 52 | 53 |
| 6 | 54 | 55 | 56 | 57 | 58 | 59 | 60 | 61 | 62 |
| 7 | 63 | 64 | 65 | 66 | 67 | 68 | 69 | 70 | 71 |
| 8 | 72 | 73 | 74 | 75 | 75 | 77 | 78 | 79 | 80 |

The Problem

81 item array with the correct <u>value</u>s for each <u>cell</u>. Each item can have a <u>value</u> between 1 and 9.

An example problem:

Revealed Indexes

A list of indexes that determine which <u>cells</u> will have their values revealed at the start of the puzzle. These <u>value</u>s are not editable. Each item represents the starting visibility for the corresponding <u>problem</u> item. More difficult puzzle levels initially reveal fewer <u>problem</u> items.

| Level | Easy | Medium | Hard | Chanllenger |
|-------------------|------|--------|------|-------------|
| Problems revealed | 35 | 30 | 27 | 24 |

The Solution

81 item array that contains the current state of the Sudoku <u>board</u>. This is made up of the <u>revealed</u> problem <u>cells</u>, user <u>guesses</u>, user <u>hints</u>, and zeros for all unanswered <u>values</u>.

Guesses

User guess for a <u>cell</u>, valid <u>value</u>s are integers between 1 and 9.

| value | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
|-------|---|---|---|---|---|---|---|---|---|
| guess | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |

Hints

User marker for a <u>cell</u>, the value is between 1 and 9 and there can be 0 to 9 hints per <u>cell</u>. Hints are used as clues by the user for possible <u>guess values</u>.

| value | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
|-------|----|----|----|----|-----|-----|-----|------|------|
| hint | -1 | -2 | -4 | -8 | -16 | -32 | -64 | -128 | -256 |

Values

The numeric representation of a <u>cell</u>'s value.

Empty <u>cells</u> (those with no <u>guess</u> or <u>hints</u>) have a value of 0. A <u>cell</u> can contain 0 to 1 <u>guess</u>es and 0 to 9 <u>hints</u>. If a <u>guess</u> is entered on a <u>cell</u> containing <u>hints</u>, the <u>hints</u> are removed. If a <u>hint</u> is entered on a <u>cell</u> containing a <u>guess</u>, the <u>guess</u> is removed.

| value | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
|-------|----|----|----|----|-----|-----|-----|------|------|
| guess | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| hint | -1 | -2 | -4 | -8 | -16 | -32 | -64 | -128 | -256 |

User enters a guess of 4, the cell value is 4.

User enters a hint of 4 into a cell, the cell value is -8.

User enters <u>hints</u> of 4 and 6 into a <u>cell</u>, the <u>cell</u> value is -8 + -32 = -40.

Interpreting <u>cell</u> values goes as follows:

```
if a cell has value of 0 it is empty
else if a cell has a positive value it contains a [#guess] of that value
else the cell is negative
   for n = 1 to 9
     hasHint = -n & (1 >> n)
```

Putting It All Together

| Ind 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 72 | 73 | 74 | 75 | 75 | 77 | 78 | 79 | 80 |
|--------|---|---|-----|---|---|---|---|-----|--------|----|----|----|----|----|----|----|-----|
| Boar8 | 6 | | 45 | 3 | 1 | | 9 | 137 | 4 | 3 | 8 | 7 | 9 | | 1 | | 26 |
| Probæm | 6 | 4 | 5 | 3 | 1 | 2 | 9 | 7 | 4 | 3 | 8 | 7 | 9 | 2 | 1 | 5 | 6 |
| Valu& | 6 | 0 | -24 | 3 | 1 | 0 | 9 | -69 | 4 | 3 | 8 | 7 | 9 | 0 | 1 | 0 | -34 |

Sudoku Model

Local Model

User State

| Туре | Variable | Description |
|------------------|-----------------|--|
| integer | level | The current default level |
| long | gameID | The game id of the last game or the game in progress |
| integer array | solution | The <u>board</u> state |
| boolean | showConflicts | Preference: Alert user when a guess conflicts with the board state. Note a correct answer could conflict |
| boolean | showTimer | Preference: Display elapsed time |
| GameRecord array | history | The users history of game results. |
| integer | easyIndex | The last easy level puzzle id started. |
| integer | mediumIndex | The last medium level puzzle id started. |
| integer | hardIndex | The last hard level puzzle id started. |
| integer | challengerIndex | The last challenger level puzzle id started. |

GameRecord

| Туре | Variable | Description |
|------|----------|-------------------------------------|
| long | puzzleId | A unique id the identifies a puzzle |

| long | date | The date the puzzle was started |
|---------|-------------|---|
| long | elapsedTime | The amount of time the user has spent on a puzzle. |
| boolean | paused | Did the user pause or leave the game. |
| integer | leve | Game level i.e. Easy, Medium, Hard or Challenger. This information may be part of a PuzzleRecord, but that may or may not be remotely stored. |

Remote Model

Device

| Туре | Variable | Description | | | | |
|--------|----------|------------------------------|--|--|--|--|
| string | deviceId | Universally unique device id | | | | |

PuzzleRecord

| Туре | Variable | Description | | |
|---------------|----------|-------------------------------------|--|--|
| long | puzzleId | A unique id the identifies a puzzle | | |
| integer array | problem | <u>Problem</u> . | | |
| integer | level | Easy, medium, hard or challenger. | | |

Sudoku API

```
public class Puzzle {
    long id;
    int index;
    int level;
    int[81] problem;
    int[] mask;
}

public class Board {
    void initialize(Puzzle puzzle);
    boolean solved();
    int[81] getSolution();
    void setSolution(int[81] solution);

int getValue(int index);
    void setValue(int value, int index);
    boolean conflict(int value, int index);
    boolean hasHint(int index);
```

```
void clearHint(int value, int index);
void clearHints(int index]);
}
```
